2. In addition, about 60,000 tons a year of crude oil from Zistersdorf, Austria, are processed by the Luetzkendorf Plant into the following products: About 40,000 tons of lubricating oils, cylinder oils, superheated steam oils, compressor oils, turbine and engine oils for motor vehicles; 5,000 - 10,000 tons of hydrogenated gasoline to be forwarded for further processing to the Taucha (M 52/K 09) distilling plant and to the Klaffenbach (N 51/K 65) plant which belongs to the Bremer Mineral Oil Plants, VEB. Also about 15,000 - 20,000 tons a year of crude oil from Zistersdorf are processed into all kinds of lubricating oils by the Herrenleite Mineral Oil VEB on the blbe River near Pirna (N 51/F 38). However, the lubricating oils are not of very good quality, as they still contain slight amounts of paraffin. Formerly, the plant only reclaimed used oils. *

Comment. According to the Soviet Zone 1949 production plan, the following production of liquid fuels was sched led: (in tons)

50X1-HUM

	Total	SAG product	ion VEB production
Motor gasoline	290,050	235,000	13,050
Technical gasoline	19,006	rn	19,006
Diesel fuel	306,000	204,000	28,000
Kerosene	11.400	3,200	
,	634,456	572,000	62,456

The total production indicated in this report is 65,544 tons above the reported quota. The 15,000-tons produced by the VEB plants is far below the plan.
